Message from
Permanent
Secretary
for Defence

Defense & Security 2022, Asia's Leading Tri-service Asian Defence & Internal Security Event is being organised under the theme "The Power of Partnership", which is based on cooperation from all sectors both public and private sectors as well as from domestic and international. The event aims to be one of the mechanisms for promoting the defense industry, which will provide an opportunity for global leading defence manufacturers to meet end users directly and provide participants with the opportunity to pursue current technology developments and the trends in the future. This will result in applying ideas and knowledge to further develop the national defence industry.

In organising the event, we are prepared in every aspect, including the readiness to prevent the spread of the coronavirus disease 2019 (COVID-19). We will use the preventive and control measures of Centre for COVID-19 Situation Administration (CCSA) as required.

As Chairman of the Defense & Security Organising Committee, I would like to invite military personnel, police, experts from educational institutions, as well as those involved in security from both public and private sectors to attend this event.

Lastly, I would like to thank the organising committee, all sub-committee, GML Exhibition (Thailand) - the show organiser, exhibiting companies and those involved in organising this event.

ACEVIEW CO., LTD.

AceView Co., Ltd. is a company specializing in domestic and overseas export through the manufacture of automobile driver safety products based on its own image processing technology.

Starting with the M-AVM (3D Around View) project to prevent accidents of blind spots of all mobility in land, sea and air, we are working on a real-time video facility control platform (F-AVM) and a real-time video control system that replace existing CCTV using video processing, storage, and transmission technologies.

The input main product is the 3D Around View System (M-AVM), a state-of-the-art, zero-blind safety driving system that allows drivers to see their surroundings as if they were looking down from the sky by installing an 185-degree wide-angle camera around them.

As the occurrence of safety accidents has emerged as a social issue, the AceView mobility solution using technology developed independently is recognized not only in Korea but also abroad and is used as the best safety platform from the private sector to the military and ships.

It is the first video control system through real-time video processing technology, and it is showing the highest supply rate to domestic government offices due to its excellent image processing technology.

In addition, research is being accelerated to expand into the fourth industry, autonomous driving technology and data service business using the developed image processing technology.
